

H2O GONE Water Soluble Stabilizer

100% Water-soluble Embroidery Backing / Stable, Non-stretch Foundation for Stitch-dense Designs

Easy to remove after stitching. No "stitch stress!"

Great for lace, appliqués, and emblems!

Use on knits or wovens.

Perfect for embroidered applications that need stability but absolutely no stabilizer remaining.

Sturdy enough for "hoop less" projects, where items are fixed to hooped stabilizer.

Excellent for stitching on paper, framed embroideries, Aida cloth and other craft goods.

So dense that only one layer is needed for best performance.

Completely dissolves in water or when laundered. No residue!

Directions

1. Hoop one layer of H2O GONE within the embroider frame. Tension should be tight. Avoid stretching or distortion.
2. Embroider the design.
3. Remove project from hoop and trim away as much of H2O GONE as possible.
4. Rinse away H2O GONE using luke warm water.

Tip: For stiff lace, simply wet the embroidery. Do not rinse! Once wet, H2O GONE will be absorbed into the stitching and will be stiff after drying.
